

# Resistant materials

**Task:** Design an environmental house of the future that needs no energy or services to be supplied. Show how energy can be generated, how water can be collected and stored.

Your house of the future might have solar panels, wind turbines and a way of collecting rain water. Use an A4 sheet of paper, use colour to present your drawings well. Add lots of detail.

Remember to explain and label the good parts of your design, label which parts are less good and explain how they could be improved.
